

RBD consulting services for the analysis of a group of satellites

Telespazio SpA has selected Tecram Srls to supply ReliaSoft [Weibull++](#), [Lambda Predict](#) and [BlockSim](#) state of the art RBD and Fault Tree analysis software for reliability and maintainability analysis. After dedicated training, Tecram was re-engaged to provide online consulting services to address the RBD modelling of a group of satellites. This was done in order to demonstrate compliance with the stringent project requirements of system and component failures at 3 months intervals.

Online consultancy

Comprehensive online support provided by Tecram to help Telespazio's engineers to correctly model a group of satellites with their relevant subsystems.

Top qualified instructors

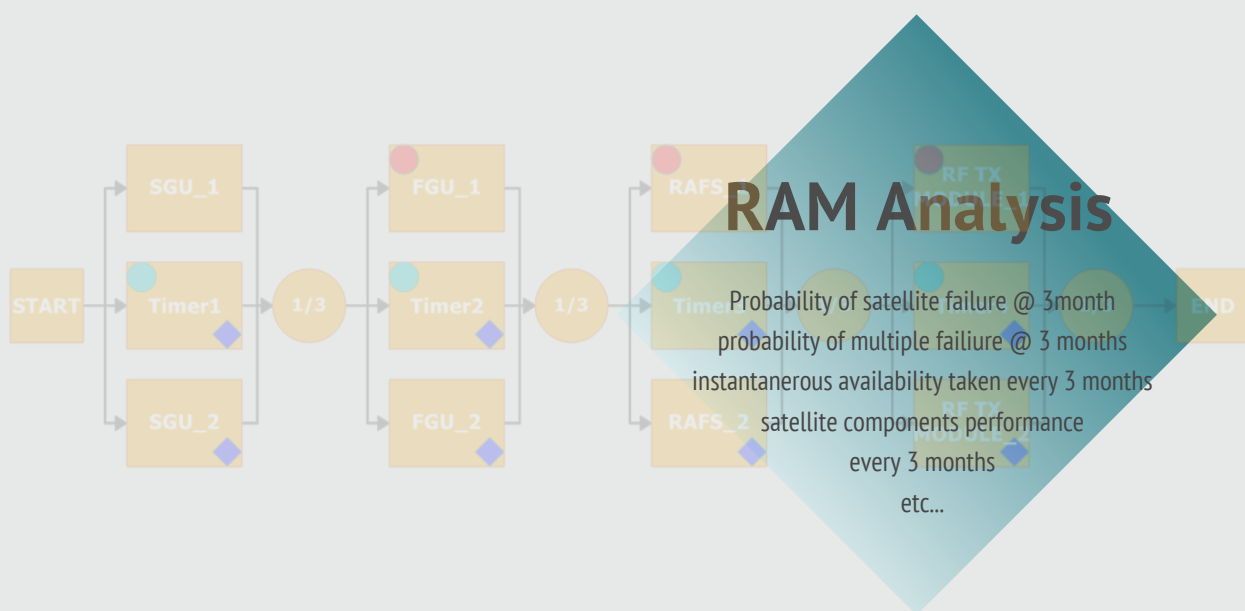

Tecram has HBK Prencchia's qualified instructors in the field of reliability and maintainability analysis with a vast experience in BlockSim.

Cost-effective solution

A very cost-effective solution for training and project work helping the customer developing a solution in a timely and constructive manner.

RBD analysis of a system of 4 satellites
